Rasti klinik

ÇRREGULLIM SOMATIZIMI I PREZANTUAR ME SIMPTOMA PSEUDONEUROLOGJIKE ME KOMORBIDITET KARDIOMIOPATHIA HIPERTENSIVE ,DIABET MELLITUS DHE HIPOTIROIDIZEM.

Objektivi : Pershkrimi I nje rasti me Çrregullim somatizimi me simptoma pseudoneurologjike ,te nje gruaje 41 vjecare .

Metoda : Nje rast klinik I vetem.

Rezultatet : Ne pershkruajme rastin e nje gruaje 41 vjecare ,e cila prej 18 vitesh manifeston simptoma pseudoneurologjike si : kriza me humbje te vetedijes ,parestezi te kokes, buzes dhe te ekstremiteteve ,ngurtesim te duarve ,fotopsi ,mjegullim te pamjes, vertigo .Per keto shqetesime ju realizua konsult Neurologu ,EEG dhe MRI ku u konkludua mungesa e problemeve neurologjike organike.Pacientja gjithashtu kishte ankesa te shumta somatike :nauze ,lodhje dhe dobesi trupore ,djerse te ftohta ,dhimbje koke ,abdominal ,mesi dhe artikulare. Pas konsultave me specialistet Kardiolog ,Endokrinolog dhe Gastro-hepatolog dhe ekzaminimeve gjak komplet, bilanc biokimik, T3,T4,TSH ,EKG, ECHO kardiake dhe abdominal rezultoi e stabilizuar per diagnozat e siperpermendura. Ndersa per ankesat humor i rene ,pagjumesi ,gjendje ankthi ajo ju pergjigj mire terapise me Fluoxetin 40mg/dite dhe Diazepam 10mg/dite.

Konkluzion : Ky eshte shtrimi i trete i pacientes ne sherbimin tone,i cili sikurse dhe dy shtrimet e meparshme eshte pasoj e problemeve social-ekonomike (divorci,vdekja e nenes,semundja e djalit dhe aksidenti i te vellait) qe kane agravuar tablon klinike te pacientes.

ABSTRACT (POSTER)

Dr.M. LIÇI, Dr.I.PRIFTI ,Dr.Shk.V.DIMOSHI (Psychiatric Hospital “Xhavit Gjata” QSUT-TIRANE)

Case Report : SOMATIZATION DISORDER PRESENTED WITH PSEUDONEUROLOGICAL SYMPTOMS AND IN COMORBIDITION WITH HYPERTENSIVE CARDIOMYOPATHY ,DIABET MELLITUS, HYPOTHYROIDISM.

Objective : To describe a case of somatization disorder presented with pseudoneurological symptoms , of a 41 years old woman.

Method : Single case report .

Results : We describe the case of a 41 years old woman , which manifests for 18 years pseudoneurological symptoms as : crisis with loss of consciousness, paresthesia of head, lips and extremities, drying of hands, photops, blurring of vision, vertigo. For these concerns you realized neurological consult, EEG and MRI which concluded the lack of organic neurological problem. The patient also had multiple somatic complaints : nausea, fatigue and bodily weakness, cold sweat, headache, lumbago ,abdominal and articular pain. After consultations with specialists Cardiologist, Endocrinologist, Gastro-hepatologist and complete blood examination, biochemical balance, T3, T4, TSH, EKG, cardiac and abdominal ECHO resulted stable for the above diagnoses. As for complaints depressed mood, insomnia, anxiety she respond well to therapy with Fluoxetine 40mg / day and 10mg Diazepam / day.

Conclusions : This is the third hospitalization of the patient in our hospital, which as well as two previous admissions is a consequence of socio-economic problems (Divorce, mother's death, son's illness and her brother's accident) which have aggravated the patient's clinical picture.
